General Cover Letter

Dear Hiring Manager or Potential Client,

I am a Front-End Development student at Noroff with previous experience as an IT instructor. I enjoy creating user-friendly websites and continuously developing my technical skills. I am interested in both development roles and independent projects, including helping small businesses establish or improve their online presence.

At GET Academy, I taught HTML, CSS, JavaScript, C# and SQL, guided students through technical challenges, and created programming tutorial videos for internal educational use. This experience strengthened my ability to explain complex concepts clearly, share knowledge and collaborate with others.

What I enjoy most about front-end development is combining creativity with technical problem-solving. I care about usability, intuitive interfaces and reusable components. I ask questions, explore different approaches and keep thinking about how to make a website easier for its users - often long after a project is finished.

Through my studies and personal projects, I have gained practical experience with responsive web development, JavaScript and API integration. I enjoy working independently as well as collaborating with a team, and I am always eager to learn.

Whether you are looking for a new team member or need a website for your business, I would welcome the opportunity to discuss how I could contribute.

Thank you for your time and consideration.

Kind regards,
Therese Camilla Nordnes
